Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php

WEATHER SYNOPSIS BY REGION

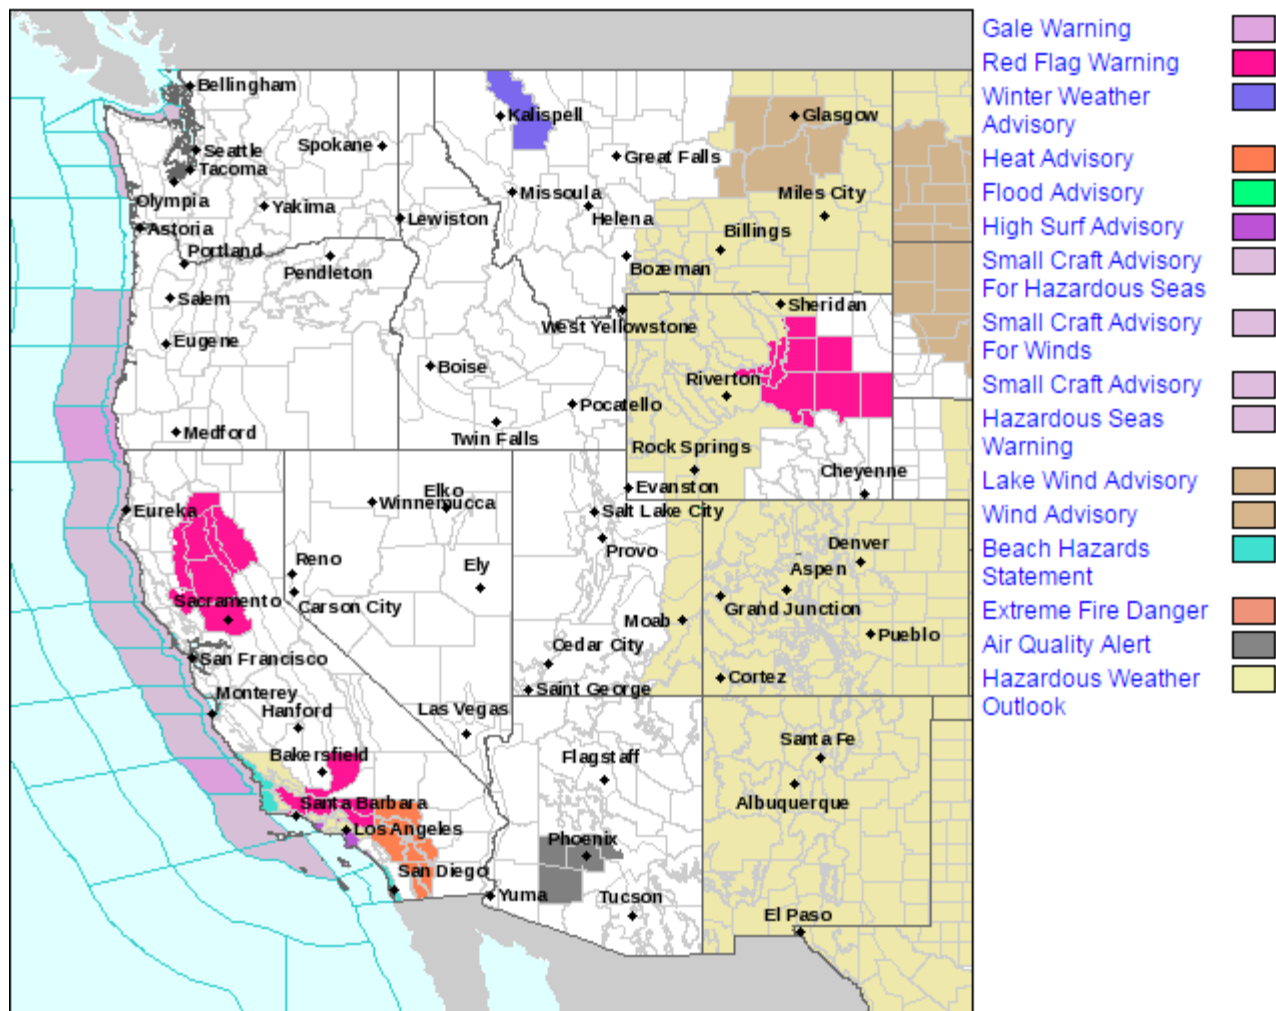

NORTHERN CALIFORNIA

The low pressure trough associated with the low is currently moving through the North California region and will be to our east later today. Light to moderate northwest to north winds are developing behind the trough. The winds will continue all day at about 10-15 mph with gusts to 25 mph, primarily in the northern and western Sacramento Valley and nearby foothills. This event is considered to be at the low end of a High Risk for Significant Fire Potential. Temperatures will be near normal and humidity will drop into the middle teens in the warmest inland areas. From Saturday through much of next week strong high pressure over the Desert southwest will be the main influence on Northern California weather. Temperatures will be 5-10 degrees above normal and humidity will drop to 7-15% each afternoon. Diurnal slope winds will prevail in inland areas - light downslope during nights and mornings and light to moderate upslope in afternoons. Overnight humidity recovery will also be poor in many inland areas (less than 40%). Thunderstorms may reach as far north as the Central Sierra beginning Wednesday, but none are expected to reach the North California region through the end of next week.

SOUTHERN CALIFORNIA

Northwest to north winds of 20 to 35 mph with gusts to 50 mph will surface across the mountains of Kern, Santa Barbara, Ventura, and Los Angeles Counties through early Saturday morning as a storm moves into Montana from Washington. High pressure will strengthen over the Southern half of the United States bringing a warming trend to the region through Monday. Maximum temperatures will be in the upper 70s and 80s across the mountains and 90s in the valleys today. Widespread triple digit heat will occur across the valleys and foothills Sunday and Monday. Minimum humidity will be mainly in the single digits and teens away from the coastal areas through Monday. The high pressure will weaken slowly Tuesday through the end of next week bringing a gradual cooling trend and a little increase in humidity to the region. Southeast to south flow aloft may bring isolated afternoon thunderstorms to the Sierra and to the mountains and deserts of Southern California east of the Cajon Pass Tuesday through the end of next week. Winds will be fairly light across most of the region Saturday afternoon through the end of next week, except there will be strong and erratic winds in and near any thunderstorms if they develop.
